Clone from GitHub

Once GIT is configured, we can begin using it to access GitHub. In this example I perform a **git clone** command to copy a repository to the local computer. When prompted for the username and password, enter your GitHub username and the previously generated token as the password.

```
justincase@ansible:~/tmp$ git clone https://github.com/edgoad/Py
Cloning into 'PythonForCyberSec'...
Username for 'https://github.com': edgoad
Password for 'https://edgoad@github.com': 
```
